**HW 1 – Inverted Index, Boolean Query Evaluation**

## **Running:**

### **Part\_One**

Should be able to `javac Main.java`

Then `java Main`

Default arguments look for a file named `files` for the file path and will log into a file there and read from a file named `documents.txt`

If given an two arguments it will take in reading path and writing path in that order.

### **Part\_Two**

`javac Main.java`

`java Main`

Default arguments look for a file named `files` and document named `index.txt`

If given one argument it will read from passed argument.

## **Notes:**

No stemming right now.
